Two step math equations are algebraic problems that require you to make two moves to find the value of the unknown variable. For example, using the equation $3x + 5 = 11$ we will need to perform two steps to find the value of x . The first step would be to get the constant values of the equation by themselves. In this case 5 and 11 are our constants.

The main difference between one-step equations and two-step equations is that one more step you need to do in order to solve a two-step equation. That additional step may be something like multiplying the variable by a certain number to get rid of a fraction in front of it. Otherwise, the rules are the same as before and these equations are just as easy to learn and solve as are the one-step ones
