creatures that began to walk habitually on two legs – emerged between five million and seven million years ago in Africa. Modern humans, the Homo sapiens, wouldn't appear until around 130,000 years ago. Important ecosystem changes, the study suggested, took place between the emergence of early and modern humans.

Human evolution occurred in ecosystems ... - Ecology News

A new paper, published in Trends in Ecology and Evolution, suggests that there is plenty of evidence that H. sapiens actually emerged within the interactions of many different populations across Africa. ... More complexity in early human evolution in East Africa Studies on two jawbones, one 2.8 million years old and the other 1.8, ...
