Darier disease causes red and white streaks on the nails and V-shaped notches to form on the tips of the nails. In pachyonychia congenita, nail beds (the parts of the nail unit that attach the nail to the finger) are thickened and discolored and are curved from side to side, forming a pincer nail deformity.

Spoon nails look like the center of your nail is scooped out. The nail becomes thin and the outer edges turn up. Your nail may crack, and the outer part may come out of the nail bed.

### Spoon Nails: Identification, Causes, and More

Koilonychia (spoon nails) A rippled deformed nail plate that appears shaped like a spoon and that is white or opaque is associated with this condition. It's often caused by age, chronic eczema, tumors, anemia, or chronic infection. The index, ring, and middle fingers are most affected. You can perform nail services if there's no sign of infection.

### Nail Reference Guide (Gothic Guide to Nail Care)

For example, ice pick-like depressions in the nails (nail pitting) are common in people who have psoriasis — a condition characterized by scaly patches on the skin. Nail pitting can also be related to connective tissue disorders, such as Reiter's syndrome, and alopecia areata — an autoimmune disease that causes hair loss.
