What is hematopoietic stem cell transplantation?

A bone marrow transplant is also called a stem cell transplant or, more specifically, a hematopoietic stem cell transplant. Transplantation can be used to treat certain types of cancer, such as leukemia, myeloma, and lymphoma, and other blood and immune system diseases that affect the bone marrow.

Hematopoietic stem cell transplantation | Cancer.Net

Haploidentical transplantation involves the transplantation of large numbers of T-cell-depleted stem cells from a donor, usually a sibling or a parent, who is half matched to the patient. Although these are the most difficult transplantations to perform successfully, there is great interest in this approach because most patients will have a donor in their family who is at least a 50% HLA match.

Read Free Hematopoietic Stem Cell Transplantation Cancer Treatment And Research

Hematopoietic stem-cell transplantation (HSCT) is the transplantation of multipotent hematopoietic stem cells, usually derived from bone marrow, peripheral blood, or umbilical cord blood. It may be autologous (the patient's own stem cells are used), allogeneic (the stem cells come from a donor) or syngeneic (from an identical twin).. It is most often performed for patients with certain cancers ...

Hematopoietic stem cell transplantation - Wikipedia

Hematopoietic stem cell (HSC) transplantation may improve outcomes of patients with hematologic malignancies not curable with conventional therapies. In some clinical settings, transplantation represents the only curative option. The feasibility and efficacy of this approach in older patients are undefined, since this population has been excluded from nearly all clinical trials.

certain types of cancer. This procedure might be called peripheral stem cell transplant or cord blood transplant, depending on where the stem cells come from.

Stem Cell or Bone Marrow Transplant - American Cancer Society

There has been a surge in haploidentical hematopoietic stem cell transplantation (HSCT) in India recently. However, there is a paucity of data on haploidentical HSCT from India. The report is an analysis of data of haploidentical HSCT performed at our center. Analysis of patients with acute leukemia or chronic myeloid leukemia who underwent haploidentical HSCT during 2014–2019 was performed.
