This broad definition also includes fjords, lagoons, river mouths, and tidal creeks. An estuary is a dynamic ecosystem having a connection to the open sea through which the sea water enters with the rhythm of the tides. The seawater entering the estuary is diluted by the fresh water flowing from rivers and streams. The pattern of dilution

Download Free Intertidal Deposits River Mouths

varies between different estuaries and depends on the volume of freshwater, the tidal range, and the extent of evaporation of the water in the estuary.

Estuary - Wikipedia

On the annual scale, Lesourd et al. (2003) have shown that subtidal deposits in the Bay of the Seine occur when flooding ($\text{flow} > 1200 \text{ m}^3 \cdot \text{s}^{-1}$) induces the expulsion
