Labor Economics lecture 1 (1 of 2) -- Introduction - YouTube

Estimating labor supply. Let the labor supply equation be $H = X b + W c + e$ where H is hours of work, X is a vector of personal characteristics, W is the market wage rate for the individual, and e is the error term. There are at least two problems with estimation: (1) H cannot be negative; (2) W is unobservable for those with H=0.

Lecture Notes 12

Introduction What is labour economics? • labour economics is the study of the workings and outcomes of the market for labour Every society – regardless of its wealth, its form of government, or organisation of its economy - must make basic decisions: what to produce, how to produce, and for whom to produce. Labour market decisions that affect everyday well-being are made by each of the three main actors in the labour market: Individuals, firms and governments These decisions require ...

MIT Economics : David Autor

Lawrence F. Katz's research focuses on issues in labor economics and the economics of social problems. He is the author (with Claudia Goldin) of The Race between Education and Technology (Harvard University Press, 2008), a history of U.S. economic inequality and the roles of technological change and the pace of educational advance in affecting the wage structure.
