Sunspot Analysis Lab Course Hero - 09/2020

You can then use this information to determine the rate of the Sun's rotation. Some sunspot facts:

- Sunspots are dark, cooler areas on the Sun's surface that indicate areas of strong magnetic activity
- They appear dark only because they are not as hot or bright as the area surrounding them (4,000 degrees C. vs. 6,000 degrees C.)
- Sunspots extend down into the Sun as well as above where loops of magnetic field lines carry charged particles
- They can last from just hours to ...

Tracking Sunspots - Solar and Heliospheric Observatory

Spectra is a free spectral analysis package. It's easy to download and easy to use. Fourier Spectral Analysis provides links to information related to the spectral analysis part of this activity. A Simple Analysis of Historical Sunspot
